

cheat sheet container gardening with lavender

plan

- Plant: Phenomenal Lavender
- Space & Light: Place your plant in Full sun
- Container: Get a medium container (20 qt/18 liters) with drainage holes at the bottom (depth min 8in/20cm)
- Soil: Choose a well-draining mix for container gardening
- Fertilizer: not needed
- Watering Can: Get a 3 gal/11 liter for containers

plant

- Fill the container with soil (right below the rim of the container)
- Dig hole deep enough to cover the entire root ball
- Gently remove plant from the pot
- Use both hands to place the plant in the soil
- Use one hand to hold the plant in place, other hand to cover the entire root ball with soil
- Water gently and evenly after planting

grow

- Water: water occasionally
- Fertilizer: not needed
- Alkaline: add a little lime to the soil

care

- Loves a warm, moderate climate
- Alkaline, dry soil
- Drought tolerant
- Early spring, snip tips for bushier growth and a good look
- In summer, snip the flower stems down to the branches

harvest

- Harvest early in the morning (summer and fall)
- Cut both leaves and flowers
- Lay flat to dry
- Grows 24-32 in or 61-81 cm tall
